AIRBORNE TACTICAL SOLUTIONS COURSE

The "Airborne Tactical Solutions" class, offers an extensive training experience tailored for public safety personnel, including patrol officers, tactical flight officers, field supervisors, K-9 handlers, SWAT team members, and aircrew. Spanning over 16 hours, this multimedia course combines informative PowerPoint presentations enriched with real-life video examples, providing attendees with essential insights into contemporary suspect tactics and effective perimeter containment strategies. Participants will explore the latest criminal evasion techniques, including using technology such as cell phones and identifying unconventional hiding locations. Emphasis will be placed on officer safety and systematic search techniques to facilitate successful apprehensions.

The course goes further by equipping aviation personnel with vital tactical skills necessary to support ground units across various law enforcement missions. Attendees will gain practical knowledge on crew coordination, perimeter setup, managing vehicle pursuits from the air, and conducting thermal imagery searches using advanced airborne tactics. Real-life scenarios, including officer-down debriefs, will reinforce the importance of critical incident preparedness and effective communication among units. This comprehensive training not only enhances the tactical decision-making capabilities of frontline officers but also strengthens the overall efficacy of public safety operations, ensuring that personnel are prepared for dynamic and potentially dangerous situations in the field.
